DETAILED ACTION

1. Claims 1-18 are presented for examination.

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Application/Control Number: 10/712,347 Page 3

Art Unit: 2672

3. The abstract of the disclosure is objected to because of the implied phrase "The present invention was accomplished to provide", at line 1. Correction is required.

See MPEP § 608.01(b).

- 4. Restriction to one of the following inventions is required under 35 U.S.C.121:
 - I. Claims 1 and 18, drawn to displaying a superimposed image of a binary waveform with its corresponding analog waveform, classified in class 345, subclass 629.
 - II. Claims 2-4 and 18, drawn to displaying a waveform along with its corresponding set of coordinate data, classified in class 345, subclass 440.
 - III. Claims 5-8 and 18, drawn to displaying a binary waveform with a reversing function, classified in class 345, subclass 427.
 - IV. Claims 9-18, drawn to displaying and editing waveforms using scale, translate and copy functions, classified in class 345, subclass 619.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate

utility such as determining if an analog signal is generated correctly at specific times and transitions of a clock signal.

Invention II has separate utility such as determining precise coordinate data at a particular point in a graph.

Invention III has separate utility such as viewing a clock signal of a computer processor.

Invention IV has separate utility such manipulating waveforms using standard editing functions such as scaling, copying, and translating. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Almis R. Jankus whose telephone number is 571-272-7643. The examiner can normally be reached on M-F, 6:30-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Razavi can be reached on 571-272-7664. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
